L02 - UAV Software Integration Block Diagram

Candidate: Lakshya Thakur
Candidate ID: TRAIN-004
Role: Systems Integration Engineer
Date: 22 October 2026

1. Purpose

This diagram shows the main software modules of a UAV and how they exchange information.

2. Block Diagram

3. Simple Explanation

- Ground Control Station: Used by the operator to monitor the UAV.
- Communication: Transfers commands and status information.
- Navigation and Sensors: Provides position and sensor data.
- Flight Control: Processes available inputs for flight-control functions.
- Health Monitoring: Checks available system status.

4. Data Flow

The Ground Control Station exchanges information with the UAV through Communication.

Navigation and Sensors provide data to Flight Control. Health Monitoring checks the available system status.

5. Note

This is a simplified, proposed diagram. The actual connections must be verified against the UAV project architecture.
